ON-FARM VETERINARY MEDICAL KIT

This is a list of supplies and basic medications that is recommended for your on-farm vet kit. While there are certainly many additional items that you may have, these are ones that most field veterinarians feel are the necessities. Download and print this list and post it in your barn for reference.

ScissorSplints – various sizes. Used for stabilization of fracture or other unstable musculoskeletal injury (luxation). Can manufacture out of PVC pipe. Broom handles also work well. Canine splints are available through vet supply and will work for smaller camelids.

Excenel: The Excenel does not need to be refrigerated. The Naxcel can also be stored at room temperature until it is reconstituted. Once reconstituted, it should be kept refrigerated and it has a short shelf life (1 week).
